DETAILED ACTION

Allowable Subject Matter

1. Claims 1-30 are allowed.
2. The following is an examiner's statement of reasons for allowance: with respect to claims 1, 19, and 28, in addition to other limitations in the claims, the prior art fails to teach or disclose the applicant's invention as claimed, particularly an impedance circuit having both a digital matching logic and an analog matching circuit.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Yanagawa (6,486,698) discloses an adjusting output buffer comprises a plurality of driver in parallel and a digital matching circuit for matching the characteristic impedance of a load, but not analog matching circuit.

Hansen et al (6,133,749) discloses an adjusting output buffer having an analog matching circuit for matching the characteristic impedance of a load, but not a digital matching circuit.
